## Rating Definitions to ISO 8528-1

All ratings in the table are in accordance with ISO 8528-1.  
 Power Factor: Single phase, 1.0 pf; three-phase, 0.8 pf.  
 Voltages: Single phase 220, 230, 240; three phase 380/220V, 400/230, 415/240. 50 Hz. Single phase 220/110, 230/115, 240/120; Three phase 220/127, 230/133. 60 Hz. Other voltages are available; refer to Lister Petter.

Power outputs are based on the optimum make of alternator for the set. Gensets fitted with other manufacturers’ alternators may not achieve the above ratings.

## Rating Conditions

A standard generating set is designed to operate in environmental reference conditions of 25 °C, 100 kPa and 30% humidity.

## Prime Power

This rating is for the supply of continuous electrical power (at variable load). There is no limit on the annual hours of operation and 10% overload power can be supplied for 1 hour in 12.

## Standby Power

This rating is for the supply of continuous electrical power (at variable load) in the event of a utility power failure. No overload is permitted.
